Cornerstone 2.7.18 Release Notes

2.7.18 is a free upgrade for all Cornerstone 2 license holders that fixes issues uncovered since the release of 2.7.

See **Cornerstone 2.7 Release Notes** for more information on the new features and improvements introduced with 2.7.

Please note that Cornerstone 2.7.18 no longer supports Subversion versions 1.4 and 1.5. If you require support for these legacy versions of Subversion then we recommend you continue to use Cornerstone 2.7.14.

2.7.18 runs on OS X 10.7 and later.

Resolved Issues

- 1.7-level Subversion updated to 1.7.22. See the **Apache Subversion Change Log** for details on the issues addressed in this version
- 1.8-level Subversion updated to 1.8.14. See the **Apache Subversion Change Log** for details on the issues addressed in this version
- Selecting "Add Certificate from Keychain…" in the "Certificates" preference pane displays an error if the keychain contains no certificates with private keys
- Unreadable character is displayed to right of file name in popup button in change view's navigation bar (OS X 10.11 only)
- "Copy as Numbered List" and "Copy as Bulleted List" commands in transcript view do not copy text to the clipboard
- Deleting a file reported as missing after case-only rename causes unversioned file with new name to be deleted from the file system
- Bug in Subversion's HTTP layer (lib_ra_serf) can cause Cornerstone to crash during authentication after an SSL server presented an invalid certificate
